

Remote Vision Testing Software

"I think that the testing method and the software have numerous applications and have potential benefits over the traditional methods of visual field testing."

- Simon Berry, Simon Berry Optometrists

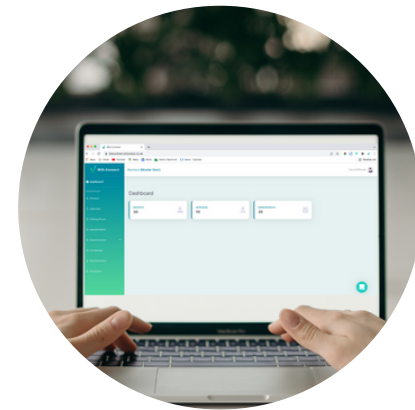

"The product brings a new dimension to the market offered alternatives."

- Vikash Chaturvedi, VSquare Medtech

What we do

IbisVision develops innovative eye technology that revolutionizes the customer journey, increases efficiency, and makes eye care more widely accessible.

Founded in 2014, IbisVision's core values have been to change the way visual examinations are performed and delivered to our patients.

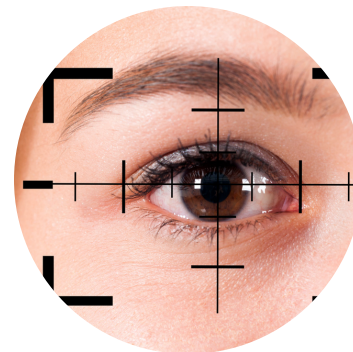

By using advances in screen technology, we can deliver examinations in real-time that previously needed large expensive equipment, freeing up time, space, and revenue.

We're improving access to eye care for everyone

We believe that everyone should be able to have their eyes tested no matter their location or circumstances.

Early detection is vital with any eye condition. IbisVision supports eye care professionals and their patients to identify changes in vision and monitor eye health.

About IBIS-Connect

With our tele-optometry platform, you can take patients through eye examinations in real-time from the comfort of their own homes via our clinician-led software.

IBIS-Connect is quick and simple; your patient logs in to their online portal and completes a tailored 'History & Symptoms' questionnaire before their triage call begins.

Patients are taken through individual eye examinations while always being positioned correctly using our intuitive software.

Our Partners

Birmingham Optical

One of IbisVision's main distributors in the UK, Birmingham Optical is a force in the UK optometry sector with trusted relationships with professionals and organisations alike. IbisVision is able to utilise the network that has been built by Birmingham Optical as well as benefit from their 60 years' experience in the industry.

VSquare

VSquare, based in India, distributes innovative medical and surgical eye care products to the optical sector. As our partner, they're taking IbisVision's technology out to their network of eye care professionals, adding another route to market for our product in India.

Pulse Active Stations Network

Pulse is a connected network of IOT-based smart kiosks located in high footfall areas across India. IbisVision is working with Pulse to implement tests onto the kiosks to allow for more access to testing that is convenient for citizens.

Did you know?

38% of the UK have not been for an eye examination in the last two years.

An estimated 93 million adults in the United States are at high risk for serious vision loss, but only half visited an eye doctor in the past 12 months.

More than 50% of sight loss is preventable.

That's why IbisVision is working with optical retailers, healthcare professionals and clinicians, academic institutions, and other industry partners to help encourage more accessible eye testing around the world.
